M-2200IEH-XR Retractable Ramp Motorcycle Lift

The M-2200IEH-XR Motorcycle lift features our innovative retractable approach ramp system which automatically retracts the approach ramp from the work space while the lift is rising. A spring loaded drop down panel for improved rear wheel service access is integrated into the table. The drop down panel swings out of the way and quickly clips back into place when not in use. We have maintained our hand held pendant for complete operation. No need to put hands or feet in harm's way when disengaging safety latches. Vise and Chock sold separately.
