

MSC-6KLP Single Post Lift

The iDeal MSC-6KLP 6,000 lb capacity single post car lift is the perfect lift for limited space applications and situations where portability is more important than a floor mounted two post lift. The MSC-6KLP low profile design and drive over ramps makes drive over loading possible and the pallet jack mechanism allows the lift to be moved to the vehicle for loading.

Under 4" New Improved Low Profile Design

Telescoping Swing Arm Design

Low Profile Telescoping Screw Up Pads

MSC-6KLP Single Post Lift

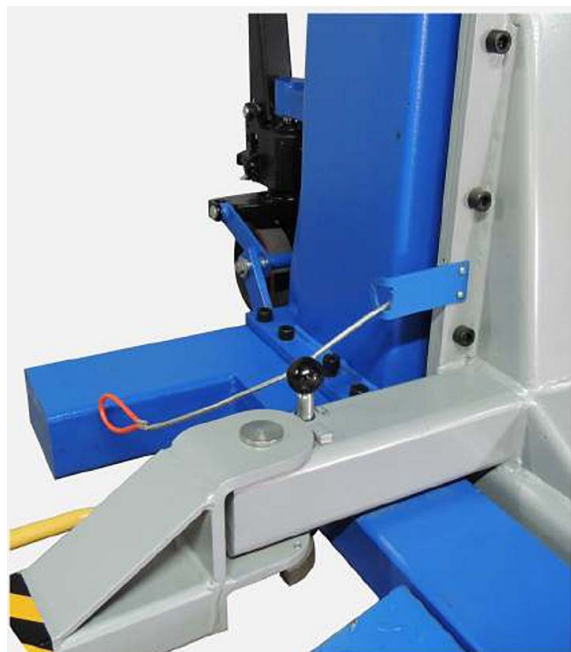

The iDeal MSC-6KLP 6,000 lb capacity can be used in a typically service bay, outside an existing bay or a home garage with limited space as long as the concrete is flat. With a lifting height of 72" the iDeal MSC-6KLP's design allows access to the underside of most vehicles making it ideal for pre-service inspections or maintenance. Around the vehicle access makes wheel service possible on most vehicles. Because of its design and portability the MSC-6KLP is the perfect solution for a homeowner with limited space and a shop looking to improve work flow or gain additional revenue from previously unusable space.
